数据简介

数据产生于所有使用腾讯位置服务的产品（例如微信、QQ、腾讯地图、京东和美团），定位点的定位次数代表一定网格范围内的服务使用量，定位次数不是人数，但有一定联系

空间范围：全国

空间分辨率：1km * 1km (2019), 5km * 5km (2020-)

时间范围：2019.12 – 2020.04

时间分辨率：小时

类型：固定位置的时序数据，流数据

数据获取

解析并存储网页 json 数据 (getXingYunPoints)

The screenshot shows the Chrome DevTools Network tab. The 'Network' panel is active, displaying a list of requests. The request 'getXingyunPoints' is selected, and its response is visible in the 'Response' pane. The response is a JSON object containing a timestamp and a list of location coordinates.

Name	Response
getXingyunPoints	{ "time": "2020-05-01 22:51:21", "locs": "1675,9655,2,3200,11215,6,2300,10690,4,2885,12080,4,3495,11365,2,-160" }

57 requests | 3.9 MB transferred | 12.6 | Line 1, Column 1

数据获取的技术细节

```
import requests
import json
import pandas as pd
from pathlib import Path
```

Python packages

```
url='https://xingyun.map.qq.com/api/getXingyunPoints'

locs=''
payload={'count':count,'rank':rank}

response=requests.post(url,data=json.dumps(payload))
datas=response.text
dictdatas=json.loads(datas)
```

Requesting & parsing

```
time=dictdatas["time"]
locs=dictdatas["locs"]
locss=locs.split(",")

temp=[]
for i in range(int(len(locss)/3)):
    lat = locss[0+3*i]
    lon = locss[1+3*i]
    count = locss[2+3*i]

temp.append([time,int(lat)/100,int(lon)/100,count])
```

Formatting & storing
